                                         enzyme (ICE). The polypeptide is used for inducing, e.g. production of IFN-gamma a useful biologically active substance, chancing cytotexicity by and inducing the formation of Aller cells. The
                                                                                                                                                                              Claim 5. Page 15. 18pp; English.
This is the amino acid sequence for the interferon darma (IEN-damma) inducing active protein which is cleaved to form the active mature protein when it is in contact with interleukin-1-beta converting
                                                                                                                                                                                                                                                                                                                                                                            Conversion of interferon inducing polypeptide precursor to active polypeptide - comprises use of interferon-1-beth-converting enzyme useful for e.g. enhancing cytotoxicity by killer cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Interferon gamma inducing precursor peptide: IFN-gamma: Interfeuklin I-beta-course ting surges, ICE, egt to winder interfeuklin I-beta-course ting surges; ICE, egt to winder antiseptic antitumour agent; immunopathy agent; antiseptic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           inducing polypeptide. The polypeptide induces ifN-gamma production in immunocompetent cells [the polypeptide is not named but is described in 3: 17136,96; and 19:008/96. An enzyme can convert this precursor form into its active form by clearing a linkage between Asp at amino acid position 36 and Tyr at amino acid position 37 of its N terminal fragment the enzyme can be obtained from a human bacmatopoletic cell and can be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              18 JUL 1997; 365376.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     inhibited by iodoacetamide and acetyl-f-tyrosyl-f-valyl-f-alanyl-f-aspart-l-al. The enzyme can be used for cleaving a fo-combinant IFW gumma pro polypeptide to form a mature polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Polypeptide-processing enzyme interferon-inducing polypeptide Claim 3; Page 15; 18pp; English

                                                                                                                                                                                                                                         Conversion of interferon-inducing polypeptide precursor to active polypeptide - comprises use of interferon-1-beta-converting enzyme, useful for, e.g. enhancing cytotoxicity by killer cells
This is the amino acid sequence for the interferon-gamma (IFN-gamma) inducing precursor peptide, which is cleaved to form the active mature protein when it is in contact with interleukin-1-beta-converting enzyme (ICE). The polypeptide is used for inducing, e.g. production of IFN-gamma a useful biologically active substance, enhancing cytotoxicity by, and inducing the formation of killer cells. The polypeptide may potentially be used as an antiviral, antitumour and immunogently gament and as an antiseptic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Interferor-gamma inducing precursor peptide.

Interferor-gamma inducing precursor peptide: IFN-gamma;
Interfeukin-1-beta-converting enzyme; ICE; cytotoxicity; killer cell;
antiviral agent; antitumour agent; immunopathy agent; antiseptic.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          FI Mutants of interferon gamma inducing polypeptide .seful as antitumour, antiviral, antimicrobial or anti imminopathic agents proclaim 4, pages 38-99, 59pp; English.

Colaim 4, pages 38-99, 59pp; English are mouse interfering amma confidence interferon represents the wild-type mouse interferon gamma inducing factors in which one or more cysteline residues are replaced with different residues at or away from the confidence are replaced with different residues at or away from the confidence structure in the confidence with different residues at or away from the confidence of interferon-gamma and are chalmed to be less toxic, more active and stable that the corresponding wild type mIGIF. The modath mIGIFs are also chained to enhance killer cell cytotoxicity and/or induce killer cell of formation, and may therefore be useful as antitumour agents, antitumour remonstberspective, and valved to be useful as antiturous. The companion can also claimed to be useful for trouting hepatitis, or acquired immunophesion services are activities and thrombour period conserved syndrome (ALDS), maluria, takersulosis and of thrombour-period caused by radiation and chemo-therapy.

It can be used for treating or preventing ALDS, condyloma accenting areas or brain cancer, granuloma, mycosis functiones, rhomatism and altergy. The protein can also be used to induce I-Nuamma production in cultured cells. The IFMyamma inducer strongly induces cytotoxicity: I Filler T-colls and when used with interleukin-2 (IL-2) and tumbur necrosis factor (IN-), may improve the effect (or reduce sequence) adoptive immunotherapy in tumburs. The DNA enroding this sequence can be used to produce the protein, which can then be purified (or assayed) sequence 157 AA:
                                                                                                                                                                                                                                                                                                                        22-MAY-1996.

Example A 3-2; Page 36-37, 48pp, English.
A novel mouse protein (R99559) induces interferon-gamma (IFN-damma) prodn. by immunocompetent cells. Its sequence was deficed from that of a cDNA clone (T32403) isolated from a mouse liner library.

Recombinant IFN-gamma inducer protein can be produced in high yields using host cells, esp. Escherichia coli, transformed with a vector
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Protein that induces damma interferon product in immunoccomportent cells - used e.g. as antiviral or antitumour agent, also induces cytotoxicity of killer cells claim 2: Page 22: 30pp: English.

This protein induces IFNgamma production in immunocompetent colls. The protein is useful is an intiviral.

The prosent sequence represents a novel protein from mouse liver cells, the prosent sequence represents a novel production in immunocompetent couls. This protein enhances cytoloxicity of killer culls and induces of their formation. It is used as an antionotic agent for antitumour from the interpresent of their formation. It is need as an antionotic agent for antitumour conditions in the treatment of atopic or immunitarial agent. The interpretation of representation of representation of representation of representation of the protein in antitudent immunitarial accordance in antitudent immunitarial for the immunitarial administration of 11.2) or by addition to the medium in which cells so sequence if it retain the patient of the patient of the patient.

Interferon-gamma inducing factor; interferon-gamma, killer rell:
antitumour agent; antiviral agent; antimicrobial agent: thumour; mYGFF;
hepatilis; malaria; tuberculosis; renal carcinoma; rheumatism; AIGS;
astosperessis, thrumbepedia, asquired immunoudeficiency syndrome.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present sequence represents a murine interleukin-18 (15-18) gallyper(14-15-16-16-16-18) is a lyn-of-gylot-young properties transduction in immune systems. The interleukin-18 receptor polypoptide can be used to centralise interleukin-18 activity or to treat interleukin-18 receptor susceptive diseases, especially to treat autoliminate or allorgic diseases or as an immunosuppressant. Conditions which may be treated include e.g. graft or organ rejection, pernicious which may be treated include e.g. graft or organ rejection, pernicious anaemia, insulin-related diabetes, discoid lupus erythematosus, allorations, activities, lieutopencia, recuments, Hitch products may also be useful in the freatment of septic shock associated with tensors of the useful in the freatment of septic shock associated with
  Mutants of interferon-damma inducing polypeptide - useful as antitumour, antivital, antimicrobial or anti-immunopathic agents Claim 6; page 44; 59pp; English.

The present sequence represents the mutant mouse interferen-damma inducing factor mIGIF/MUT11. The wild-type mouse interferen-damma

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             motatic human and mouse interferon gamma inducing factors in which one or motatic by the investion grands are or with different residues at or away from the consensus sequences shown in W48956-W48958. The mutant midgres are expable of stimulating immunosinglethat cells for the production of interferon-gamma and are claimed to be less toxic, more active and stable that the our estimated the midgre. The mutant midgres are also claimed to enhance killer cell cytotoxicity and/or induce killer cell formation and may therefore be useful as antitumour agents, antitumour formation and may therefore be useful as antitumour agents, antitumour
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             of engline personal obteoclastoma, Behoet's Syndrome, of english personal obteoclastoma, Behoet's Syndrome, obteoclastoma, obteoclastoma arthitis, deformity ostitis, primary hyperthyroidism and obteoporosis

                                                                                                                                                                                                                                                                                                                                                                                                                                          The present sequence represents the mutant mouse interferon-gamma inducing factor midit/MUT12. The wild-type mouse interferon-gamma lactor (midit) sequence is sown in MARANA. The invention provides for motant human and nouse interferon-gamma inducing factors in which one or more cystoine residues are replaced with different recidues at or away from the consensus sequences shown in W48956-W48958. The mutant midiffs are capable of stimulating immunocompetent cells for the production of interferon-gamma and are claimed to be less toxic, more active and stable than the corresponding wild type midiff. The mutant midiffs are also chaimed to whather their overlaying the motant midiffs are also claimed to be useful as antitumour agents, antitumour immunotherapeutics, untiviral agents and artimicrobial agents. The mutant midiffs are also claimed to be useful for treating bepatitis.
                                                                                                                                                                                                                                                                                                                                                                                   acquired immunudeficiency syndrome (AIDS), malaria, tubercalosis, soli mulignant tumours (e.g. renal carcinoma), rheumatism, osteoporosis and thrembed enia caused by radiation—and chemo-therapy.

This is the amino acid sequence of the rat interferon-gamma inducious factor (GIE) isoform also known as interleukin-18-alpha (II-18-alpha). It can be used to transform a cell, which upon its expression can cause the cell to produce rat INTE, i.e. IL-18 or IL-18 alpha. It is made by the deficient of 57 bases (360-417) from V20875, a probable expo. The antibody to ISTE ISTE and probes derived from it, are useful for detection of II-18 of IL-18 alpha process in a sample. The archivel of IL-18 of IL-18 alpha process.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This is the amino acid sequence of the rat interferon-gamma inducing factor (IGIF), also known as interleukin-18 (11-18). It can be used to transform a cell, which upon its expression can cause the cell opposite rat IGIF, i.e. IL-18 or IL-18 alpha. The antibody to IGIF, IGIF and probes derived from it, are useful for detection of IL-18 or IL-18 alpha present in a sample. The amount of IL-18 or IL-18 alpha present in a sample can be used to quantitate stress in a mammal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    08-SEP-1997; U15891.

On the present sequence represents the mutant human interferon-gamma inducing factor IGIF/MUT21. The wild-type human interferon-gamma inducing factor sequence is shown in W48959. The invention provides for mutant human and mouse interferon-gamma inducing factors (IGIF) in which one or more cysteline residues are replaced with different residues at or away from the consensus sequences shown in W48956-W48958. The mutant IGIFs are cupable of stimulating immunocompetent cells for the production of theerferon-gamma and are claimed to be less toxic, more active and consensus are supable of stable than the corresponding wild type interferon-gamma inducing factor. The mutant IGIFs are also claimed to enhance killer cell cytotoxily analyzer induce killer cell formation, and may therefore

                                                                                                                                                                                                                                                                                                                                                                                                                              Protein that induces gamma interferon product in immunicommpetent process; used e.g. as antiviral or antitumour agent, also induces proved in the first profess.

Claim 2 Page 22 3CFp English.

CO This sequence represents the interferon gamma (IFNgamma) inducer protein CO immunocompetent cells. The protein is useful as an antiviral, antitumour, antisoptic, immunoregulatory and plateletinoreasing agent.

CO In the investion immunoregulatory and plateletinoreasing agent.

CO It can be used for treating or preventing AIES, condyluma aduminatum, or real in brain captur, granuluma, nyodise fungacione theuraits and collition of collitors. The protein can also be used to induce TFNgamma production in CO cultured cells. The IFNgamma induces trongly induces anythogolity of hiller Trocals and when led with interleuklic (IL-2) and thouse can be used to immunotherapy in tumours. The DNA encoding this sequence can be used to protein antibodies.

It is useful as an activitial, antitumor, autibacterial, immunoreculatory and blood platelest chancing agent, and can be used in adoptive immunotherapy. It is also used to raise monoclanal autibodies.
                                                                                                                                                                                                  Example A 3-2; Page 36-37, 48pp, English.

A novel mouse protein (P99559) induces interferon-gamma (IFN-gamma) prodn. by immunocompetent cells. Its sequence was deduced from that of a cDNA colone (T32403) isolated from a mouse liver library.

Recombinant IFN gamma inducer protein can be produced in high yields using host cells, esp. Escherichia coli, transformed with a vector
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Mouse mature interferon-gamma inducer protein.
Interferon-gamma inducer protein; IFN-gamma; antiviral; viruoide;

Murius protein for induction of interferon-gamma.
Interferon-gamma; immunocompetent cell; malignant tumour;
interferon bacterial infection; immune disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Claim 6) Page 41-42: 48pp: English.

Claim 6) Page 41-42: 48pp: English. by immunocompotent cells. It is the groduct of a normal product by immunocompotent cells. It is the groduct of a CDNA Clone (132404) obtd. From a human liver library. The protein echiaces the cytotoxicity of killer cells and/or rightness the formation of killer cells (e.g. NK cells) lymphokina artivating killer (ANK) oblis, and hydroxic Tropis) lymphokina artivating killer (ANK) abils, and hydroxic Tropis) antitumor, antibacterial, immunoregulations and blood platelet enhancing agent and can be used in adoptive immunotherapy. It is also used to raise manusclonal antibadies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                    W24262;

purpose of the property of the protein from nowes live cells. The present sequence represents a novel protein from nowes live cells. The present sequence represents a novel production in immunocompeter cells. This process inchances cytotoxicity of killer cells and induces their formation. It is used as an aptioncotic meant for antitumour immunotherapy, an antiviral including anti-flavor antibacterial area immunotherapy, an antiviral including anti-flavor cells. 3 it is also used to the appropriate when formulated with incubation 3, it is also used to the appropriate and thrombotypopagia associated with used to the appropriate and thrombotypopagia associated with
radiotherapy or chemotherapy of leukaemia and other caucers. When used in antitumous temporterapy, this posed projets significantly improves the immunotherapoutic effect of interloukin-2 (II-2), compared with use of II-2 alone, either when administered to the patient (before administration of II-2) or by addition to the medium in which crits sequence 157 AA:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                26 JAN 1998 (first entry)

                                                                                                                                                                                                                                         This polypeptide induces IEN-yamma production in immunocompetent relis (the polypeptide is not named but is described in the 2016/96 and 19309/96.) An engine it there is the present form of this polypetide into this active form by cleaving a linkage between Asp at amino acid position is and Tyr at amino acid position 3.5 the precursor. The cusyme can be obtained from a human harmatopoleric cell and can be inhibited by indesectamide and acetyl-fityresyl-fively-fitalanyl-fit aspartified. The engine can be used for cleaving a recombinant HIN-damen propolypeptide to form a mature polypeptide.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Fifodiliarz,
